I trained an AI model on my own face... now it generates me in any scene.

@Seetha Ram design

What I Built?

A custom LoRA trained on my face dataset using Flux2 Klein (fal.ai).

Integrated into a ComfyUI workflow for controlled character generation.

Workflow

- LoRA training in fal.ai (Flux2 Klein)
- Image generation with Flux2 Klein model in ComfyUI
- Prompt generation with Qwen-VL node
- Output focus on Character consistency

QwenVL - Prompt generation node in ComfyUI

Integrated QwenVL-4B-Instruct (GGUF) as a prompt-generation node in ComfyUI to produce structured prompts with enhanced control over style, lighting, and scene coherence.scene consistency

A young tsrs2 with tousled dark brown hair and stands confidently against a vibrant solid yellow backdrop, one hand casually resting on his forehead back while the other is tucked into his pocket; he wears a loose-fitting cream-colored T-shirt featuring bold red and yellow **"SEE THAT AI"** comic-style lettering, paired with tailored royal blue trousers that taper at the ankles, complemented by white velcro sneakers and striped beige socks; rendered in ultra-detailed fashion photography style with smooth textures and saturated color palette emphasizing contrast between cool blues and warm yellows; shot from a full-body angle with shallow depth of field isolating the subject.

(tsrs2:1.1) A stylish young man with neatly styled dark hair and a confident gaze behind sleek black sunglasses, seated casually on a mustard-yellow cube against a vibrant monochromatic yellow studio backdrop; he wears a plush cream-colored shearling jacket over a light gray hoodie and matching joggers, complemented by bold white sneakers accented with vivid purple triangular logos and textured soles, all rendered in photorealistic ultra-detailed 8k resolution with cinematic lighting that casts soft shadows and highlights his relaxed posture; the composition is captured from a low-angle perspective emphasizing his grounded stance and modern streetwear aesthetic, framed to draw focus on his fashion-forward ensemble while maintaining a minimalist, high-energy mood.

AI

Result

Consistent identity across:

- Poses
- Lighting
- Environments

One character. Infinite outputs.

Why LoRA Matters

LoRA (Low-Rank Adaptation) allows you to personalize large AI models efficiently without full model retraining.

Key Benefits

- High character consistency
- Low compute cost
- Faster training cycles
- Easy integration into workflows

Consistency in Gen AI content isn’t magic. It’s a system.

LoRA + Flux + ComfyUI = Identity at scale.

Lets build with AI
